age=20  
print("Name",name,"\n Age",age)
```

```
Name NANCY SINHA  
Age 20
```

2. X="Datascience is used to extract meaningful insights." Split the string

```
In [8]: X="Datascience is used to extract meaningful insights."  
X.split()
```

```
Out[8]: ['Datascience', 'is', 'used', 'to', 'extract', 'meaningful', 'insights.']
```

```
In [9]: X.split("a")
```

```
Out[9]: ['D', 't', 'science is used to extr', 'ct me', 'ningful insights.']
```

3. Make a function that gives multiplication of two numbers

```
In [10]: def func(a,b):  
         c=a*b  
         print("The product of a and b is ",c)  
n=int(input("Enter first number: "))  
m=int(input("Enter second number: "))  
func(n,m)
```

```
Enter first number: 5  
Enter second number: 6  
The product of a and b is 30
```
